

AVSIV

特殊集積弁 Specialty Integrated Valves

Specialty Valves and Control Products

Dymatrix™

We offers truly one-of-a-kind valves

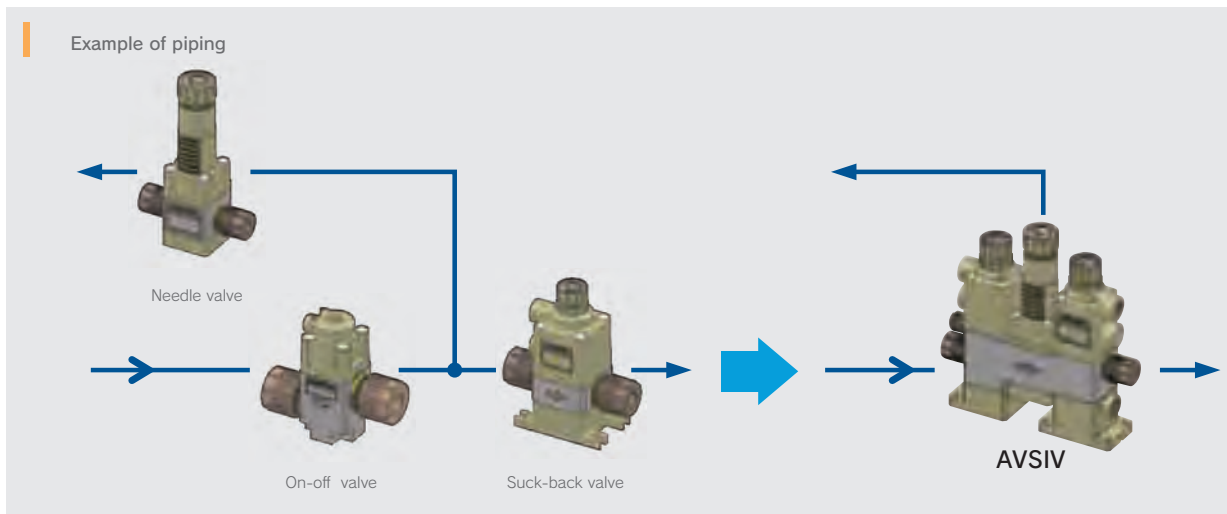

Application specific solutions engineered to meet unique design challenges. Integrate any combination of Dymatrix components onto a single hybrid valve body. These multi-function valves provide a compact solution, eliminating multiple connections and possible leak points. AVSIV valves simplify piping layout in complex systems and reduce installation time.

※ Customized and different combinations of valves that meet all needs.
※ Please contact us for detailed specifications on any necessary requirements.

Savings made with equipment space

1. Simplifying complicated piping: Simplifying piping layouts in equipment reduces man-hours needed for installation, while also increasing flexibility in terms of equipment design.
2. Reducing dead spaces: A combination of piping and numerous valves leads to inevitable stagnation within piping and valves. The integration of valves and elimination of additional piping solves this very problem.
3. Cost reductions: The number of piping materials can be reduced to a minimum.
