

# TYPE-14 TRUE UNION DIAPHRAGM VALVE

Engineered valve solution for flow control in hazardous fluid applications

The Type-14 diaphragm valve features body-to-bonnet sealing performance, visual position indication, weir design for excellent throttling capabilities and built-in travel stop to prevent over-tightening and eliminate compressive strain. Bubble-tight sealing can be achieved even in tough applications containing suspended particles or slurries.

**OPEN**

**CLOSED**

**Diaphragm Identification**  
Under cover indication of diaphragm

**Travel Stop**  
Prevents overtightening

**3-Layer Diaphragm**  
PTFE/PVDF/EPDM

Vapor protection low compression set

**Weir Type Design**  
Precise chemical flow control

**Bonnet/Body Separation**

Isolates bonnet and internals from media

**Panel Mount**

Stainless steel inserts  
optional for fastening to panel

**True Union Design**  
Permits simple installation/maintenance
